

Features

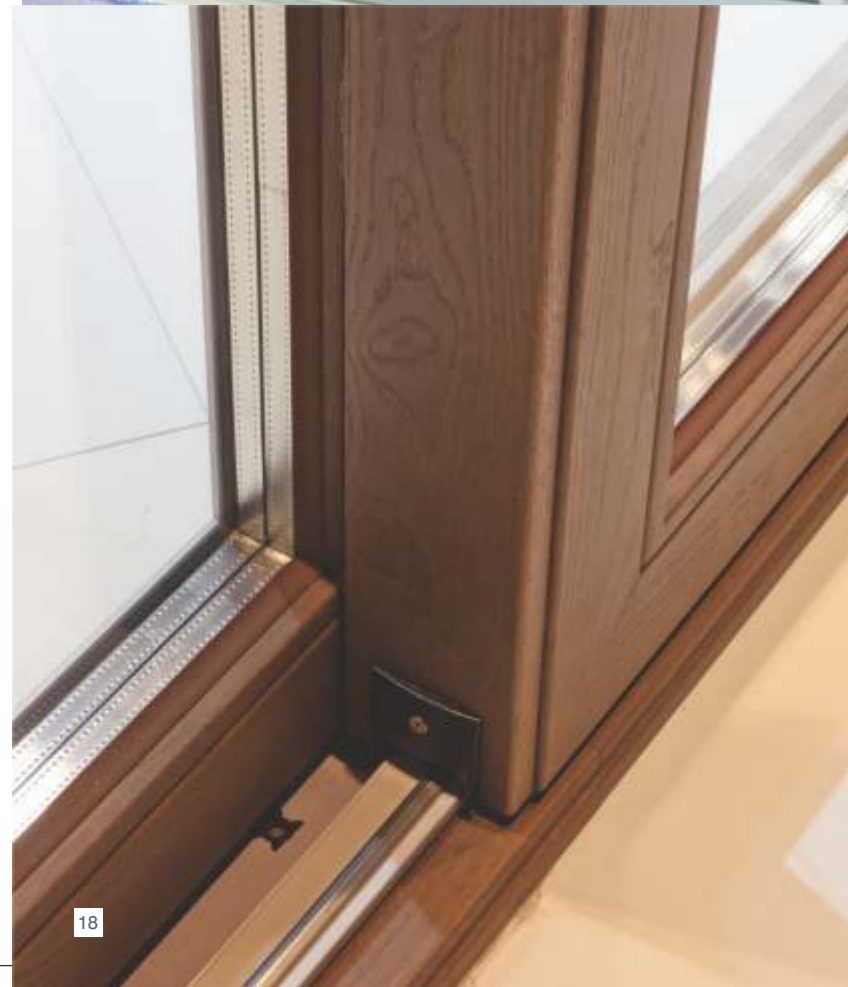

This system enables the realization of windows by means of composed frames: the external part is made of aluminium profiles, the internal one is made of natural heartwood. The heartwood in all its types and colours inside give warmth and naturalness to the interior, concealing an aluminium heart and structure which reduce the maintenance operations and keep their performances in the time.

Security and comfort

High levels of security: burglar proof windows and doors with perfect opening and closing mechanisms, anti-theft system and possibility of automation.

Design

The great structural strength of aluminium combines with the sensitivity and style that only a natural surface can transfer to an environment. The aesthetic lines are versatile and exciting; the choice of natural wood coverings is wide and surprising.

ALUWOOD
Aluminium Wood Windows

The wood – aluminium system offers a varied assortment of profiles with customized solutions for all demands, from residential buildings to major construction projects. The classic, offset design is based on solid technology with excellent characteristic values. For those who love natural wood applied to contemporary forms, aluminium-wood is the perfect choice. Great resistance, security and air-tightness with an aluminium core... as well as the stunningly stylish shades and look of various types of wood.
